--	---	--	---

- Wireframed and coded a dynamic view for a browser-based app, implementing Angular and JavaScript for a seamless UX with CRUD operations; provided custom graphic design for UI.
- Collaborated with team members to establish overall architecture for back end.
- Utilized a RESTful API to connect front and back ends.

- Customized a cloud-based database platform, improving client and donor tracking and standardizing program data collection for grant writing and reporting. Provided documentation and training for administrative staff and field service providers.
- Authored grant proposals and impact reports; implemented a new system for managing the research, application, and reporting process.

- Provided critical administrative support for the organization, including accounting/bookkeeping, grant writing/reporting, and program data collection/management.
- Authored grant proposals for more than \$1.5M in federal block grant funding and \$2M in contributions for state tax credits; tracked an additional \$1.4M in private contributions.
- Crafted visually engaging newsletters, brochures, and other literature; produced custom forms for clients & employees, including applications, intake forms, time sheets, and various internal documents.
